SUMMARY

Technology & Digital Transformation professional with 4+ years of experience across Government/Public Sector, Insurance and FinTech, spanning technology strategy, process transformation, product and solution design. Skilled in translating business problems into scalable solutions using AI, data, APIs and digital platforms, with experience across strategy, solution design, implementation, UAT and digital adoption.

EMPLOYMENT & EXPERIENCE

NITI Aayog – Government of India

New Delhi, India

Individual Consultant (Technology & Digital transformation)

Jan, 25 – Present

- Analyze complex business, policy, and user problems to identify process gaps and translate ambiguous requirements into structured digital strategies, solution frameworks, user workflows, and implementation roadmaps, enabling faster alignment between business and technology teams.
- Develop digital and AI transformation strategies by assessing business needs, user expectations, technology feasibility, and implementation constraints, enabling stakeholders to move from problem statements to actionable product priorities and transformation roadmaps.
- Integrated GenAI into research, problem structuring, solution ideation, and executive presentations, reducing initial strategy and presentation development time by **50%**.
- Led **2 AI-led transformation PoCs—NDAP 2.0 and WEPNext** — from problem identification and use-case definition through solution design and strategic implementation planning.
- Conceptualized and evaluated **10+ AI use cases and product features** by analyzing business requirements, user pain points, and process gaps, translating identified opportunities into user-centric workflows and scalable solution concepts.
- Incorporate stakeholder and user feedback into product journeys and platform enhancements, identifying adoption barriers and improvement opportunities to strengthen usability and engagement.
- Translate strategy into functional requirements and support UAT, performance monitoring, vendor coordination, implementation, and continuous improvement to ensure delivered solutions remain aligned with intended business and user outcomes.
- Drive transformation initiatives across **11 States**, working with government stakeholders, technology partners, and ecosystem organizations to translate strategic priorities into actionable interventions and scalable solutions.

Binary Semantics Private Limited

Gurugram, India

Business Analyst

Apr, 24 – Jan, 25

Associate Business Analyst

May, 22 – Mar, 24

- Led shift from manual insurance-rate configuration to an API-based marketplace model; defined a standardized data dictionary, engaged **20+ insurers**, onboarded **15+**, reduced internal rate-management effort by **90%**, and enabled insurers to manage rate updates via APIs.
- Analyzed operational challenges, customer pain points, and business requirements and translated them into scalable digital solutions, functional requirements, process flows, and implementation approaches across insurance and fintech platforms.
- Redesigned customer onboarding and KYC workflows to simplify verification processes, improve operational efficiency, and create smoother digital customer journeys.
- Defined business and functional requirements for API-led integrations across the sector, working with engineering and external stakeholders to automate core insurance processes and reduce manual dependencies.
- Applied SQL and Power BI to analyze customer behaviour and operational data, converting findings into business insights and recommendations supporting product and operational decisions.
- Served as the primary bridge between business stakeholders and engineering teams, translating business objectives into functional specifications and supporting successful delivery of product enhancements.
- **End-to-End Digital Delivery:** Supported digital initiatives from requirement discovery and solution definition through development coordination, testing, UAT, implementation, and continuous product improvement.

SKILLS & TOOLS

- **AI & Digital Transformation:** AI Strategy, Digital Transformation, AI Use Case Identification, AI-enabled Solution Design, Technology Strategy, Transformation Roadmaps, Digital Adoption
- **Strategy & Product:** Structured Problem Solving, Product Strategy, Solution Design, Product Discovery, Business Process Optimization, User Journey Design, Business Case Development, Go-to-Market Strategy
- **Data & Analytics:** SQL, Power BI, Tableau, KPI design & Performance Tracking, Data Analysis & Insight Generation
- **Tools:** ChatGPT/GPT, Claude, Gemini, Codex, JIRA, Confluence, Figma, Draw.io, MS Visio, MS Office
- **Delivery:** Agile/Scrum, SDLC, Requirements Engineering, UAT, Stakeholder Management, Cross-functional Delivery

EDUCATION

Indian Institute of Technology - Delhi <i>Executive (Product Innovation & Design Thinking for Business)</i>	New Delhi, India 2024-25
Delhi Technological University <i>MBA (IT and Operations & SCM)</i>	New Delhi, India 2020-22
Kurukshetra University <i>B.Tech (Computer Science Engineering)</i>	Haryana, India 2014-18
